Lesson 8

Objective: Understand the need to use the same units when comparing measurements with others.

Suggested Lesson Structure

- Fluency Practice (10 minutes)
- Application Problem (5 minutes)
- Concept Development (35 minutes)
- Student Debrief (10 minutes)
- Total Time (60 minutes)

Fluency Practice (10 minutes)

- Speed Writing 1.OA.5 (3 minutes)
- Race and Roll Addition 1.OA.6 (4 minutes)
- Cold Call: Addition and Subtraction Within 20 1.OA.6 (3 minutes)

Speed Writing (3 minutes)

Materials: (S) Personal white boards, timer

Note: Throughout the first two modules, students have been practicing counting by ones, twos, fives, and tens, as well as Say Ten counting.

Reviewing these counting patterns prepares students for Module 4 by strengthening their understanding of place value and their ability to add and subtract. Many students are familiar with skip-counting, and though skip-counting by twos, fives, and tens is not a Grade 1 standard, the teacher can incorporate these counting patterns if appropriate.

Choose a counting pattern with which students need more practice. Students count on their boards by the chosen pattern for a minute. Tell them to erase their boards but remember how high they counted. Then, give them another minute to try to count even higher.

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

If you have students who are not able to count by the chosen pattern without numerical visual cues at this point in the year, use a tool such as a number line or the hundreds chart. Students can color the pattern on the number line or hundreds chart so that they have a visual representation as they count on their own.
Race and Roll Addition (4 minutes)

Materials: (S) 1 die per set of partners

Note: This fluency activity reviews the grade level standard of adding within 20.

All students start at 0. Partners take turns rolling a die, then saying a number sentence adding the number rolled to the total. (For example, Partner A rolls 6 and says, “0 + 6 = 6.” Partner B rolls 3 and says, “6 + 3 = 9.”) They continue rapidly rolling and saying number sentences until they get to 20, without going over. Partners stand when they reach 20. (For example, if partners are at 18 and roll 5, they take turns rolling until one of them rolls 2 or both of them roll 1. Then, they both stand.)

Cold Call: Addition and Subtraction Within 20 (3 minutes)

Note: This review fluency addresses Grade 1’s standard and practices including units when adding length.

For directions on how to play Cold Call, refer to G1–M3–Lesson 6.

T: 4 centimeters + 2 centimeters is? (Pause to provide thinking time.) Students with pets?
S: (Only students with pets answer.) 6 centimeters.
T: 14 centimeters + 2 centimeters is? (Pause to provide thinking time.) Students with no pets?
S: (Only students with no pets answer.) 16 centimeters.

Continue playing, practicing addition and subtraction within 20. As always, scaffold instruction by beginning with easy problems and slowly increasing the complexity.

Application Problem (5 minutes)

Each crayon is 9 centimeter cubes long. The paintbrush is the same length as 2 crayons. How many centimeter cubes long is the paintbrush? Use centimeter cubes to solve the problem. Write a number sentence and a statement to answer the question.

Note: Students continue to use concrete materials to consider problem situations. Continue to encourage students to build each part of the story, using the cubes to think through what they know and to identify what they do not yet know. During the Debrief, students can demonstrate their strategies for solving the problem. The example above right shows several ways in which students may solve this Application Problem. Some students may simply align the cubes and solve without drawing.
Lesson 8

Understand the need to use the same units when comparing measurements with others.

Date: 3/13/14

Lesson 8

NYS COMMON CORE MATHEMATICS CURRICULUM

1.3

Concept Development (35 minutes)

Materials: (T) Measuring Rules chart (from G1–M3–Lesson7) (S) 1 brown bag of 2 new crayons, 10 linking cubes, and 10 centimeter cubes per pair

Gather the students in the meeting area in a semi-circle.

T: We have measured with many different tools so far. Who can name the different tools we have used to measure?

Review the rules for measuring properly using the chart created in the previous days’ lesson.

T: (Distribute a brown bag with materials listed above to each pair of students.) You and your partner are going to measure the new crayons with the materials in your bag. Don’t forget about the rules for proper measuring!

T: How many cubes long was your new crayon? (Note: Do not tell students which cubes to use.)

S: Mine was 9 cubes long. → Mine was 3 cubes long.

T: That’s interesting. These crayons are brand new, they came from the same box which means they should be the same size. (Match up the crayons.) And they are! Why are we getting different measurements?

Ask students if they measured properly by going over each rule, repeating the last rule twice to ensure that no one mixed the cubes to measure.

T: Why do we have different measurements? Talk with your partner.

S: We were measuring with different cubes. We didn’t mix them up, but I measured with smaller cubes, the centimeter cubes. My partner measured with bigger cubes, the linking cubes. → We didn’t do anything wrong. We measured correctly. It’s just that our answers are different because we used different size cubes from each other.

T: Great thinking! Even though you measured properly, it sounds like we need to add a rule for sharing and communicating about our measurements. When someone says, “My crayon is 3 cubes long,” and another person says, “No! It’s 9 cubes long,” this can become a frustrating conversation because they are both right! So, how can we help these two students?

S: They have to say, “My crayon is 3 linking cubes long,” or, “My crayon is 9 centimeter cubes long.” → We have to say what type of tool we used to measure!

T: Yes! We need to be precise when we communicate about which length unit we used to measure. Let’s practice measuring more items and communicating their measurements precisely on your Problem Set.

MP.6

NOTES ON MULTIPLE MEANS OF REPRESENTATION:
Highlight vocabulary that could be unfamiliar for your English language learners as you teach the lesson. Vocabulary in this lesson that you may want to highlight is sharing and communicating. Provide some examples of how students share and communicate outside of math so that they can make the connection.
Give each student, or pair of students, one set of the following measuring tools:

- 20 small paper clips
- 20 large paper clips
- 20 toothpicks
- 20 centimeter cubes

Ask students to measure the classroom objects with their assigned measuring tools. Remind students to write the word *about* if their measurement is not exactly a certain length unit long. Circulate and ask students about their measurements, encouraging them to use the length unit label as they share. (Note: The use of the word *about* was first introduced in G1–M3–Lesson 4. Remind students that if they are going to use this word the appropriate way to use it is, “My pretzel rod is about 18 centimeter cubes long.”)

**Problem Set (10 minutes)**

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first.

For the Problem Set and Homework, each student gets one of the following: bag of 20 small paper clips, bag of 20 large paper clips, bag of 20 toothpicks, bag of 20 centimeter cubes. Be sure to have each student take the bag home to complete the homework assignment.

**Student Debrief (10 minutes)**

**Lesson Objective:** Understand the need to use the same units when comparing measurements with others.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner who used the same length unit before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- Compare your measurements to your partner’s (a student who used a different tool). How are your answers different?
- Why do we need a label, or a length unit, along with a number when we are writing our measurements? Why can’t we use the number only?
- How can it be true that when Student A says the glue stick is X paper clips long and Student B says it is Y centimeter cubes long, they are both correct?
- Student A says she used 9 centimeter cubes to measure the crayon. Student B says she used 3 small paper clips to measure the crayon. Why do you think she needed so many more centimeter cubes to measure the crayon compared to using the small paper clips?
- Pick three objects from your sheet. Name your items in order from shortest to longest. Name your items in order from longest to shortest.
- Would the order change if you were using a different measuring tool to measure length? Why or why not?
- Display an example of the Problem Set for Lesson 7. Look at the caterpillar on each page. How do our measurements on each page relate to today’s lesson?
- Look at your Application Problem. How much longer is the paintbrush compared to one crayon? Why is it important that you included the label centimeters or centimeter cubes after the number in your statement?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students’ understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.
Lesson 8: Understand the need to use the same units when comparing measurements with others. Date: 3/13/14

**Name** ___________________________  **Date** __________________

Circle the length unit you used to measure. Use the same length unit for all objects.
