

Lesson 9

Objective: Answer *compare with difference unknown* problems about lengths of two different objects measured in centimeters.

Related Topics:

[More Lesson Plans for Grade 1 Common Core Math](#)

Suggested Lesson Structure

■ Fluency Practice	(18 minutes)
■ Application Problem	(5 minutes)
■ Concept Development	(27 minutes)
■ Student Debrief	(10 minutes)
Total Time	(60 minutes)

A NOTE ON STANDARDS ALIGNMENT:

In this lesson, students compare centimeter cubes as a concrete form of *compare with difference unknown* problem types. This bridges towards the Grade 2 standard of measuring to determine how much longer one object is than another (**2.MD.4**), although the lesson specifically focuses on comparing the concrete cubes rather than the more abstract numerical representations of the measurements.

Fluency Practice (18 minutes)

- Race and Roll Addition **1.OA.6** (5 minutes)
- Sprint: Addition Within 20 **1.OA.6** (10 minutes)
- Number Sentence Swap **1.OA.4** (3 minutes)

Race and Roll Addition (5 minutes)

Materials: (S) 1 die per set of partners

Note: This fluency activity reviews the grade level standard of adding within 20.

All students start at 0. Partners take turns rolling a die, then saying a number sentence adding the number rolled to the total. (For example, Partner A rolls 6 and says, “0 + 6 = 6.” Partner B rolls 3 and says, “6 + 3 = 9.”) They continue rapidly rolling and saying number sentences until they get to 20, without going over. Partners stand when they reach 20. (For example, if partners are at 18 and roll 5, they take turns rolling until one of them rolls 2 or both of them roll 1. Then, they both stand.)

Sprint: Addition Within 20 (10 minutes)

Materials: (S) Addition Within 20 Sprint

Note: This Sprint addresses the Grade 1 standard of adding and subtracting within 20. It is the same Sprint from two days prior, so students will likely do better today. Along with celebrating improvement between Sides A and B, celebrate improvement from the last time this Sprint was given.

NOTES ON MULTIPLE MEANS FOR ENGAGEMENT:

While some students thrive during Sprints, others may not enjoy having to complete a task being timed. Cultivate healthy *personal best* competition during Sprints so that students focus on their improvement.

Number Sentence Swap (3 minutes)

Say a subtraction sentence aloud, saying “the mystery number” for the unknown answer (e.g., “ $5 - 3 =$ the mystery number”). Call on a student to rephrase the sentence as an addition sentence (e.g., “ $3 +$ the mystery number $= 5$ ”). Pause to provide thinking time. Students solve for the mystery number on your signal.

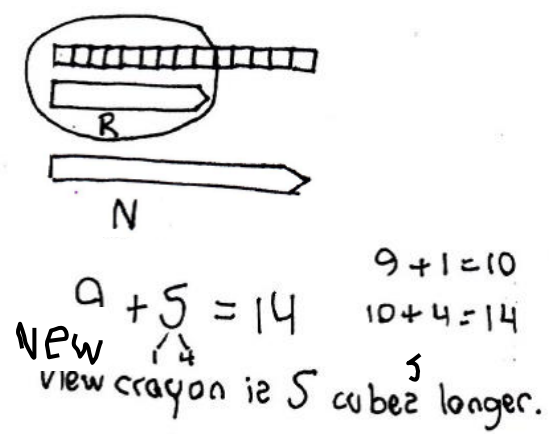

Suggested sequence: $5 - 3$, $15 - 3$, $6 - 4$, $6 - 4$, $16 - 4$, etc.

Application Problem (5 minutes)

Corey buys a super-cool, extra-long crayon that is 14 centimeters long. His regular crayon is 9 centimeters long. Use centimeter cubes to decide how much longer Corey’s new crayon is than his regular crayon.

Write a statement to answer the question.
Write a number sentence to show what you did.

Note: This problem continues to provide students with opportunities to concretely build various lengths with centimeter cubes. As students work towards solving *compare with difference unknown* problem types, experiences with concrete objects like centimeter cubes can strengthen understanding. Students will be exploring the comparison of centimeter cubes during today’s lesson. As students work, notice how they are solving and use your analysis during the Concept Development.

Concept Development (27 minutes)

Materials: (T) 2 different color centimeter cubes (e.g., blue and yellow), dry erase marker, popsicle stick, crayon, glue stick, small paper clip, unsharpened pencil, new colored pencil, measurement chart from G1–M3–Lesson 6 (S) Bag with 20 blue and 20 yellow centimeter cubes, bag with classroom materials from G1–M3–Lesson 4, new colored pencil

Note: Adjust the Concept Development as necessary based on your observations of student successes and challenges during G1–M3–Lesson 6, as well as during the most recent Application Problems. Today’s Concept Development is an opportunity to continue supporting student understanding of the *compare with difference unknown* problem types within the concrete context of comparing lengths of centimeter cubes. As addressed in the Note on Standards Alignment, the focus of the lesson should be on comparing the cubes themselves rather than the Grade 2 standard of comparing the measurements alone.

Gather students in the meeting area in a semi-circle formation.

T: (Post the measurement chart from G1–M3–Lesson 6.) The teacher next door and I were playing a game. Whoever finds the longer object on our desk would win, but the object could not be longer than a new pencil. For each extra centimeter in length, the person with the longer object would get a point.

- T: He found a popsicle stick, and I found a dry erase marker, just like the ones on our chart (point to the chart). My dry erase marker measured 12 centimeters and his popsicle stick measured 15 centimeters. He said he gets 15 points, but I don't think that's right. Let's lay the centimeter cubes down and compare them to see how many points he will get in our game.
- T: I've got 12 centimeter cubes here in my hand. (Lay the two objects in the middle. Point to the chart.) The dry erase marker is 12 centimeters long. Will I have enough cubes to measure my dry erase marker?
- S: Yes! It is 12 centimeters long, and you have 12 centimeter cubes.
- T: (Lay down blue centimeter cubes next to the dry erase marker. Point to the popsicle stick measurement of 15 centimeters on the chart.) Will these same 12 cubes be enough to measure the popsicle stick?
- S: No! There are only 12 centimeter cubes. The popsicle stick is 15 centimeters long.
- T: (Lay down 12 blue centimeter cubes next to the popsicle stick.) The teacher next door says he gets 15 points because it took 15 more centimeter cubes to measure the popsicle stick! Look at the marker and the centimeter cubes we laid down. Is he right? Does he need 15 more cubes? Talk with a partner, how many more cubes does he need? (Have partners share their thinking with the class.)
- T: Now, let's try the other teacher's idea. (Add 15 more cubes, this time using yellow cubes.) Wow, this is too long! It's much longer than the difference between what he already has and what he needs. What should I do?
- S: Take away all of the extra cubes until it lines up with the end of the popsicle stick.
- T: (Three yellow cubes are left.) So, if I had 12 cubes and he had 15 cubes, how many more cubes did the teacher need compared to me?
- S: 3 more cubes.
- T: How much longer is the teacher's popsicle stick compared to my marker?
- S: 3 centimeters.
- T: How much shorter is my marker compared to the teacher's popsicle stick?
- S: 3 centimeters.
- T: So, for that round, the teacher got three points because his stick was 3 centimeters longer than my marker. He tried to get 15 points for that one, but I'm glad we figured out that he only gets 3 points.

Repeat the process by having students work with their centimeter cubes, measuring using the following contexts.

Model as much as appropriate.

- Measure a new colored pencil and an unsharpened pencil as in the game between the two teachers.
- One student measures and compares the lengths of a crayon and a glue stick to see which item is shorter and by how much.

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Reading word problems aloud facilitates problem solving for those students who have difficulty reading the text they are presented with. Make sure students with reading difficulties are not held back by the reading when they are able to solve the math problems.

- Kelly is knitting a scarf for her doll. It needs to be 13 centimeters long. She has already knitted 9 centimeters. How many more centimeters need to be knitted?

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first.

Note: For the Problem Set, students will use actual centimeter cubes to solve the problems.

Student Debrief (10 minutes)

Lesson Objective: Answer *compare with difference unknown* problems about lengths of two different objects.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

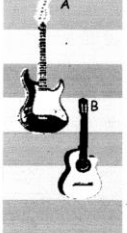

You may choose to use any combination of the questions below to lead the discussion.

- Look at Problems 3 and 4 on the first page. What do you notice about the answers? Explain to your partner why this is so.
- Look at Problem 4 on the second page. Can you think of a number sentence that can help you check your answer?
- What strategy helped you when you tried to find the difference between two objects? (Counting on.)
- Look at today’s Application Problem. How does it apply to today’s lesson?

NYS COMMON CORE MATHEMATICS CURRICULUM Lesson 9 1•3

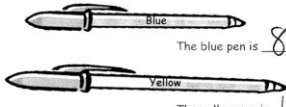

Name Maria Date _____

1. Look at the picture below. How much longer is Guitar A than Guitar B?

Guitar A is 1 units longer than Guitar B.

2. Measure each object with centimeter cubes.

The blue pen is 8 centimeters

The yellow pen is 10 centimeters

3. How much longer is the yellow pen than the blue pen? $10 - 8 = 2$

The yellow pen is 2 centimeters longer than the blue pen.

4. How much shorter is the blue pen than the yellow pen?

The blue pen is 2 centimeters shorter than the yellow pen.

COMMON CORE Lesson 9: Answer compare with difference unknown problems about lengths of 2 different objects. Date: 6/18/13 engage^{ny} 3.C.7

NYS COMMON CORE MATHEMATICS CURRICULUM Lesson 9 1•3

Use your centimeter cubes to model each problem.

1. Austin wants to make a paper clip train that is 13 paper clips long. If his train is already 9 paper clips long, how many more paper clips does he need?

(Students use their cubes.)

4 more paper clips.

2. Kea’s doll is 12 centimeters long and Megan’s doll is 8 centimeters long. How much shorter is Kea’s doll than Megan’s doll?

(Students use cubes to model. Then, draw a picture of your model.)

Kea’s doll is 4 cubes shorter.

3. Kim cuts a piece of ribbon for her mom that is 14 centimeters long. Her mom says this ribbon is 8 centimeters too long. How long should the ribbon be?

(Students model with centimeter cubes.)

It should be 6 cubes longer.

4. The tail of Lee’s dog is 15 centimeters long. If the tail of Kit’s dog is 9 centimeters long, how much longer is Lee’s dog’s tail than the tail of Kit’s dog?

(Students use centimeter cubes to model.)

Lee’s dog’s tail is 6 centimeter cubes longer than Kit’s.

COMMON CORE Lesson 9: Answer compare with difference unknown problems about lengths of 2 different objects. Date: 6/20/13 engage^{ny} 3.C.8

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students' understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

A

Number correct:

Name _____

Name _____

Date _____

1. Look at the picture below. How much **longer** is Guitar A than Guitar B?

Guitar A is _____ unit(s) **longer** than Guitar B.

2. Measure each object with centimeter cubes.

The blue pen is _____.

The yellow pen is _____.

3. How much **longer** is the yellow pen than the blue pen?

The yellow pen is _____ centimeters **longer** than the blue pen.

4. How much **shorter** is the blue pen than the yellow pen?

The blue pen is _____ centimeters **shorter** than the yellow pen.

Use your centimeter cubes to model each problem. Then, draw a picture of your model.

5. Austin wants to make a paper clip train that is 13 paper clips long. If his train is already 9 paper clips long, how many **more** paper clips does he need?

6. Kea's doll is 12 centimeters long, and Megan's doll is 8 centimeters long. How much **shorter** is Megan's doll than Kea's doll?

7. Kim cuts a piece of ribbon for her mom that is 14 centimeters long. Her mom says the ribbon is 8 centimeters too long. How **long** should the ribbon be?

8. The tail of Lee's dog is 15 centimeters long. If the tail of Kit's dog is 9 centimeters long, how much **longer** is Lee's dog's tail than the tail of Kit's dog?

Name _____ Date _____

Use your centimeter cubes to model each problem. Then, draw a picture of your model.

1. Mona's hair grew 7 centimeters. Claire's hair grew 15 centimeters. How much **less** did Mona's hair grow than Claire's hair?

Name _____

Date _____

1. Look at the picture below. How much **shorter** is Trophy A than Trophy B?

Trophy A is _____ units **shorter** than Trophy B.

2. Measure each object with centimeter cubes.

The red shovel is _____.

The green shovel is _____.

How much **longer** is the green shovel than the red shovel?

The green shovel is _____ centimeters **longer** than the red shovel.

Use your centimeter cubes to model each problem. Then, draw a picture of your model.

3. Susan grew 15 centimeters and Tyler grew 11 centimeters. How much **more** did Susan grow than Tyler?

4. Bob's straw is 13 centimeters. If Tom's straw is 6 centimeters, how much **shorter** is Tom's straw than Bob's straw?

5. A purple card is 8 toothpicks long. A red card is 12 toothpicks long. How much **longer** is the red card than the purple card?

6. Carlos' bean plant grew to be 9 centimeters high. Dallas' bean plant grew to be 14 centimeters high. How much **higher** is Dallas' plant than Carlos' plant?
